

****Updated design for 2023****

- **Supplied ready to use by the market leader**
- **For cleaning pipes from 75mm to 300mm diameter – up to 170m long.**
- **Totally redesigned from the ground up using our latest 3D software**
- **This machine is now 1.5m shorter than all previous models, making it easier to tow and manoeuvre**
- **Fully guarded & CE marked**

SPECIFICATIONS

- Heavy duty design
- Safety system- fitted with guards & emergency stops
- c/w 40 boring rods
- Fitted with high speed axles & wheels
- Stainless steel carriage rollers - no more rust
- Proven & trusted design
- HATZ diesel engine (prime mover)
- 1.5m shorter than all other machines
- Can clean to a dead end
- Can clean through 22.5 bends
- On board water pump
- Aluminium guarding - looks good for years
- Upgraded hydraulic system
- Low maintenance Stainless steel runners = zero rust

OPERATION

A pipe cleaning head is fitted to a series of flexible rods, these rods are then inserted into the pipe. During insertion and retraction, the rods are rotated which effectively "drills" the pipe clean. The pipe can be cleaned during rod insertion and retraction.
